

# Rheem® is excited to announce changes to the Electric Heater Kits for the Endeavor™ Line of Air Handlers.

## These changes are highlighted below:

### Smart, Plug-and-Play Operation

Using an exclusive, custom, patent pending connector and self-identifying technology, these Heater Kits are automatically recognized and set up by the Communicating Air handler Control. There is no need to manually select the Heater kit size in the thermostat as the built-in electronic chip inside the connector of the heater kit provides the necessary information to the control to set up appropriate air flows and staging.

### Up to 3 Stages of Operation

13KW and higher sizes will be available in 3-stage configuration. However, these Heater Kits will be able to run in 2-stage mode on existing Rheem Air handlers.

### Backward Compatibility

The new heater kits are fully backward compatible and can be used with existing Rheem Air Handlers, manufactured after 2016, by using an adapter, Part Number 45-106229-04.
